

Notes -

Max door size = 1.1m wide x 2.4m High

Max door weight = 130Kg

Maximum pipe run from compressor / control position to doors = 30m.

Note - multiple door operators can run from single air compressor, which must be sized appropriately. Operators can be grouped together with shared control panels, this can generate significant cost savings. Contact WDC for advice / quotation.

Do not open the door beyond 90 degrees.
