

Notes -
 Max door size = 1.1m wide x 2.4m High
 Max door weight = 130Kg
 Maximum pipe run from compressor / control position to doors = 30m.

Note - multiple door operators can run from single air compressor, which must be sized appropriately. Operators can be grouped together with shared control panels, this can generate significant cost savings. Contact WDC for advice / quotation.

Doors to be opened at the end of the door's swing path. Do not open beyond 90 degrees.
